UiO resources for agentic AI

How far can you get without a subscription to Claude Code?

Lex Nederbragt

October 9, 2026

Lex Nederbragt

- Teaching professor (‘Dosent’), Dept. of Biosciences
- Research: Genomics
- Topics: Programming, Bioinformatics, Pedagogy
- Teaching
  - BIOS1101 – Introduction to computational models for Biosciences
  - Other bioinformatics courses

My starting point

What can we use AI for in our work?

- **Within UiO's framework**
- Because then we can easier get on board
  - the IT department
  - management (?)
  - more employees (?)
- But also because I think my work should pay…

The layers of agentic AI

A large language model (LLM)

- GPT
- Claude
- Gemini
- GLM/Kimi/…

A harness

- Framework around the language model that governs how the model is used

Harness: examples

- Claude Code/Cowork from Anthropic
- Codex/ChatGPT from OpenAI
- Antigravity from Google
- OpenClaw
- Hermes agent
- …

➡️ So far biggest focus on software developers (coders)

🎉 Can easily be used for knowledge work too!

The layers at UiO

A large language model (LLM)

- UiO offers these via APIs

> ⚠ **Warning**
>
> The following is probably outdated soon.

The layers at UiO

A large language model (LLM)

- UiO offers these via APIs
  - The GPT UiO API
  - Microsoft Foundry (formally called Azure OpenAI)
  - Google Cloud Platform (GCP)

GPT UiO API: the models

Model name	Made by	Country	Infrastructure
GPT-5.4	OpenAI	USA	Microsoft Azure
GPT-5, 5.1 Thinking/mini	OpenAI	USA	Microsoft Azure
GPT-OSS-120B	OpenAI	USA	NTNU
GLM 5.3	Z.ai	China	NTNU
Mistral Medium 3.5 128B	Mistral AI	France	NTNU
NorwAI Magistral	NorwAI, NTNU	France, Norway	NTNU
Kimi K2.6	Moonshot AI	China	NTNU
Qwen 3.8	Alibaba Cloud	China	Educloud UiO
Gemma 4	Google DeepMind	China	Educloud UiO
Borealis 27B	National Library of Norway	Norway/USA	NTNU
NorMistral 11B	Language Technology Group, UiO	Norway/France	NTNU

GPT-5.6-Terra and Luna are only available from the gpt.uio.no web interface.

Microsoft Foundry: the models

Open AI

- GPT-6-astra
- GPT-6.1-sol
- GPT-6.1-luna
- …

Anthropic

- claude-fable-5.1
- claude-opus-5.5
- claude-sonnet-5
- claude-haiku-5.5
- …

Other providers

- USA: Microsoft, Meta, xAI, …
- Europe: Mistral
- China: Deepseek, Moonshot (Kimi), Alibaba (qwen)
- Many models from Huggingface
- …

Google Cloud Platform: the models

Google

- Gemini 3.8 Flash Medium

Anthropic [1]

- Claude Sonnet 4.6 (Thinking)
- Claude Opus 4.6 (Thinking)

The layers at UiO

A large language model (LLM)

- UiO offers these via APIs

A harness

- Codex/ChatGPT from OpenAI
- Antigravity from Google
- Claude Code - coming soon
- OpenCode, open source

Speaking of APIs…

- The apps can also ‘talk’ to UiO’s IT services that have an API

- Examples
  - Nettskjema
  - Canvas
  - Panopto
  - Vortex (web pages on uio.no)
  - Timeplanlegging TP
  - WiseFlow (exams)
  - National Knowledge Archive (NVA)
  - …

Image created with Gemini: “Create a collage of the logos of these services.”

Use cases

- Read Nettskjema results
- Design and create a new Nettskjema
- Design and create content for a Canvas room
- Send a message to all students in a course via Canvas

Skill sharing

- So-called ‘skills’ describe workflows in a markdown file
- These can be shared between staff
- Contributes to scaling

What about

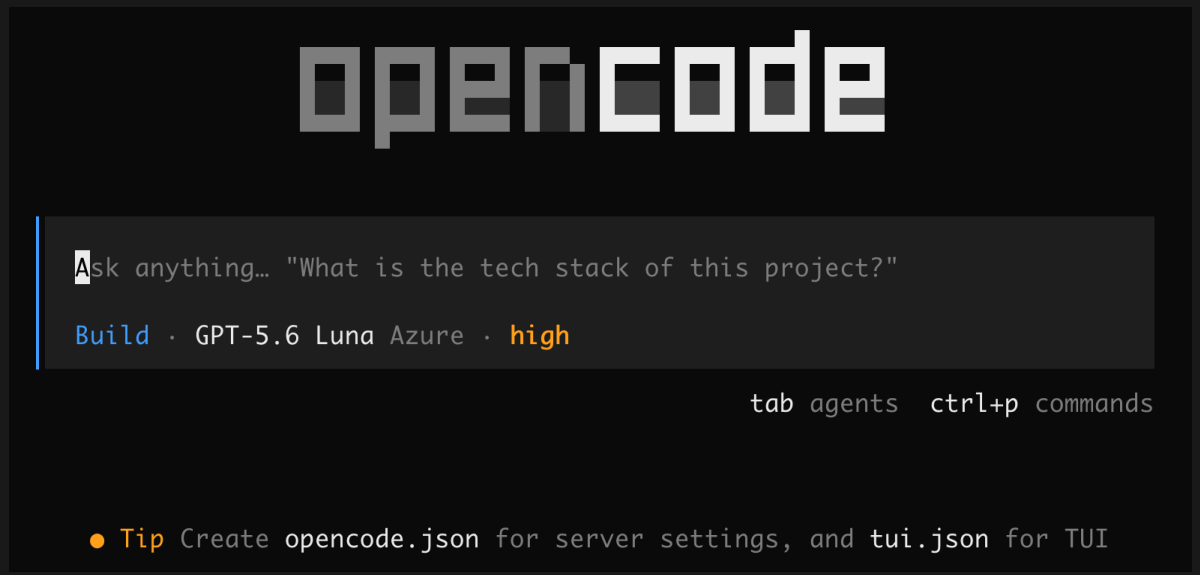

Sensitive (‘Red’) data

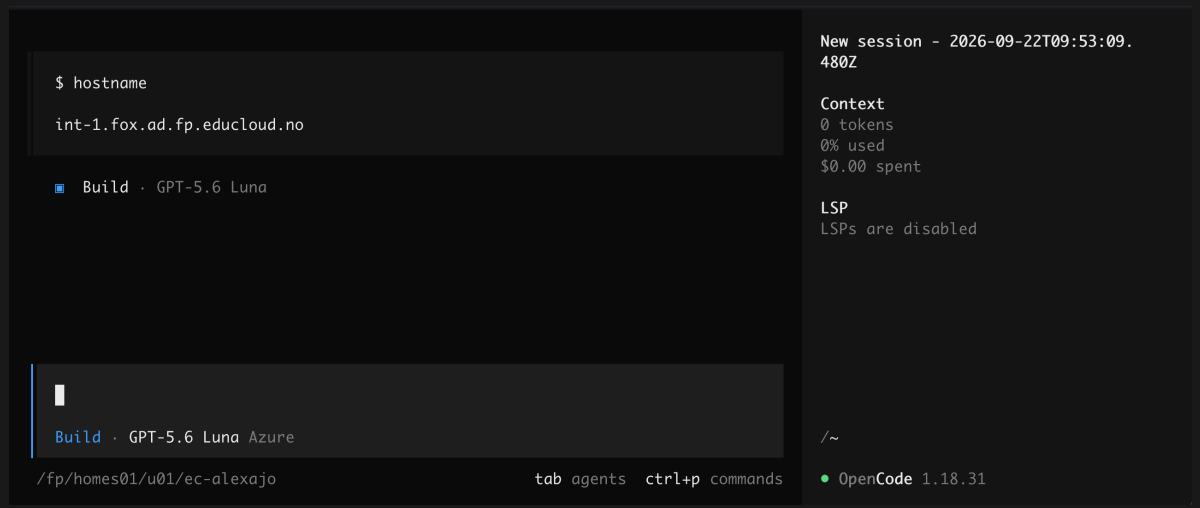

- Possible with models from gpt.uio.no

OpenCode on Fox (Educloud)

- Create a Slurm script that runs the following steps: …
- Modify the job script so that the steps run in parallel
- Find duplicates in my files
- How much disk space am I actually using?

National resources

Where can I run models?

- Educloud (Fox)
- Sigma2 (Olivia)
- NREC: Norwegian Research and Education Cloud

The Costs

Token costs/budget

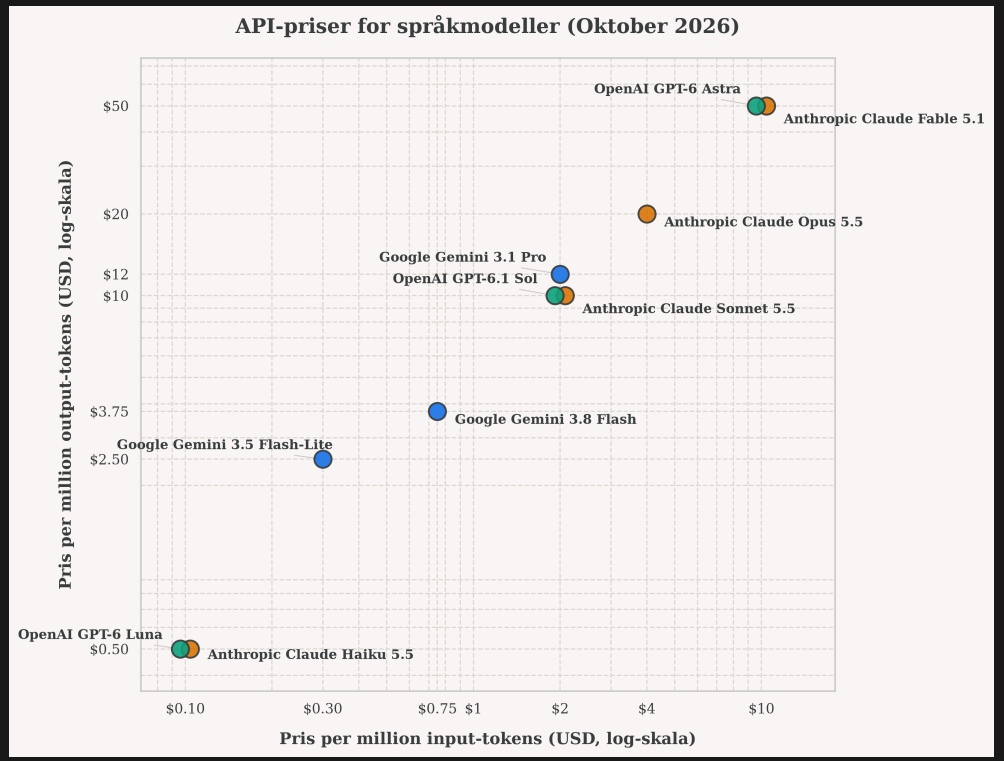

- GPT UiO API
  - Budget of 5M–30M tokens per month (depending on the model)
  - No bill is ever sent

Model name	M Tokens
GPT-5.4	5
Gemma 4	25
Mistral Medium 3.5 128B	10
Kimi K2.6	30
Borealis 27B	15
NorMistral 11B	15
NorwAI Magistral	5
Qwen 3.8	25
GPT-OSS 120B	30
GLM 5.3	30
Multilingual E5 Large Instruct	5

The Costs

Token costs/budget

- Microsoft Foundry from UiO
  - Token usage is charged
  - Requires an account at UiO (‘kontostreng’)
  - Costs over 500 NOK trigger an invoice

The Costs

Token costs/budget

- Google Cloud Platform
  - Requires an account at UiO (‘kontostreng’)
  - Costs: ?

The Costs

A note on local models

- Can be used through for example Ollama
- Expose an OpenAI-compatible API
- Harnasses can all use this
- Allows using red data
- Often only good enough for simple, well-defined tasks

Token costs/budget

- Free
- Well, the price of a (very) good computer/laptop

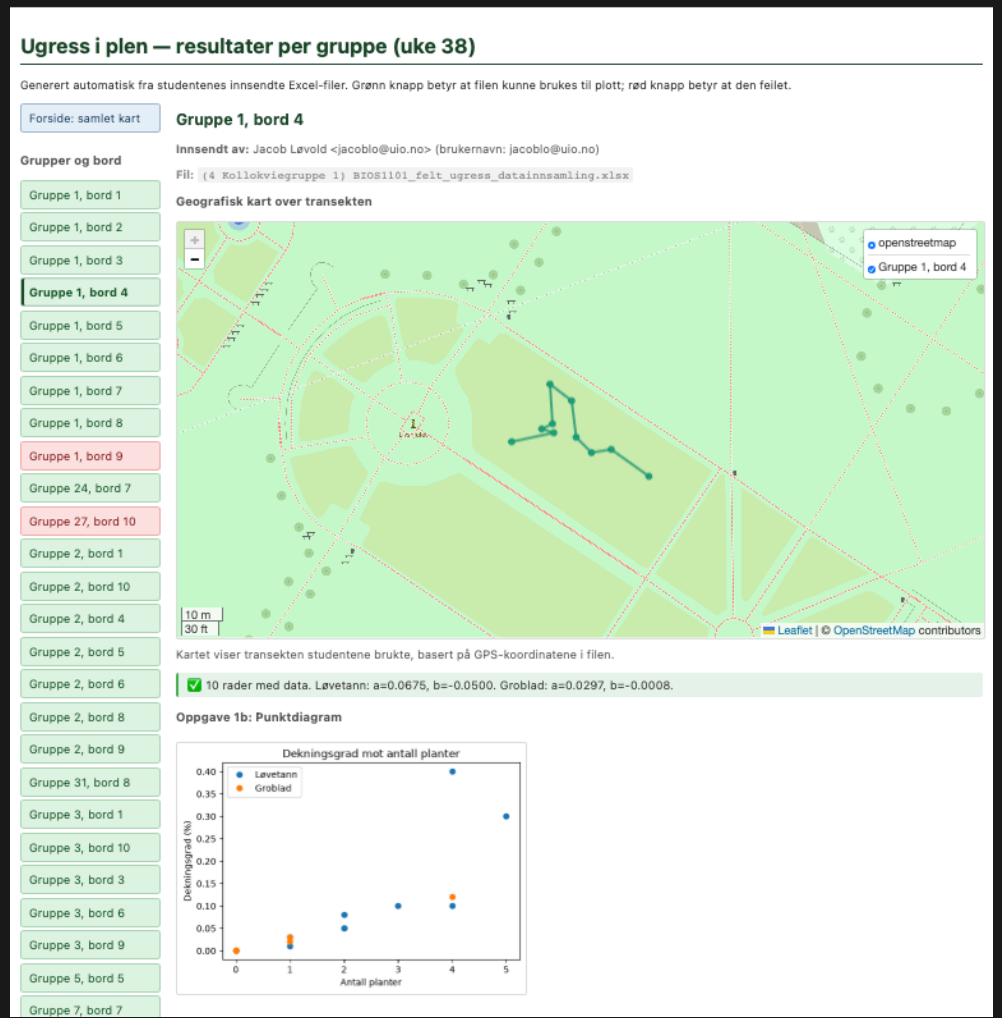

Example from my own work

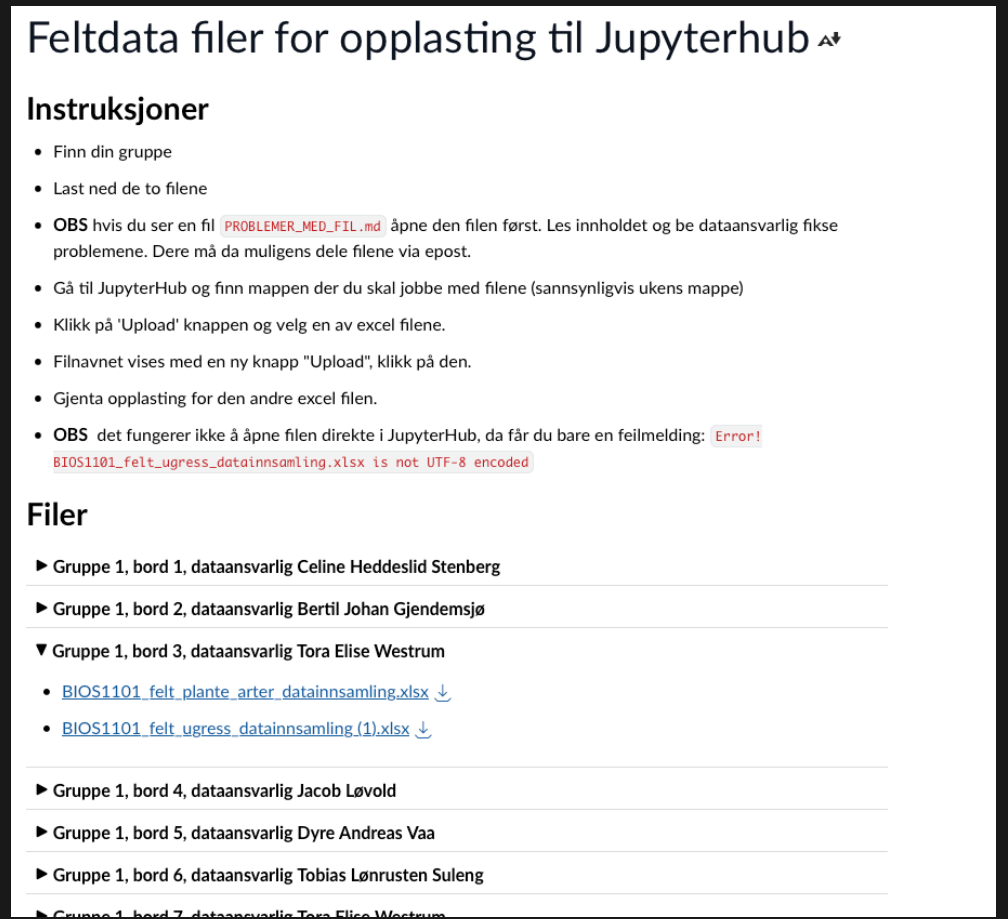

What I use for what

- ChatGPT/Codex
  - OpenAI models (GPT-6.1-sol, GPT-6-luna)
  - More complex tasks
  - Data analysis
  - Creating overviews in Excel or html
- OpenCode
  - GPT UiO models (Kimi, GLM)
  - Improving teaching materials
- Antigravity
  - Occasional testing (free tokens!)
- Hermes agent
  - OpenAI models (GPT-6.1-sol, GPT-6-luna)
  - GPT UiO models (Kimi, GLM)
  - Agentic AI
    - Canvas
    - Nettskjema
    - Repetitive tasks

Example from my own work

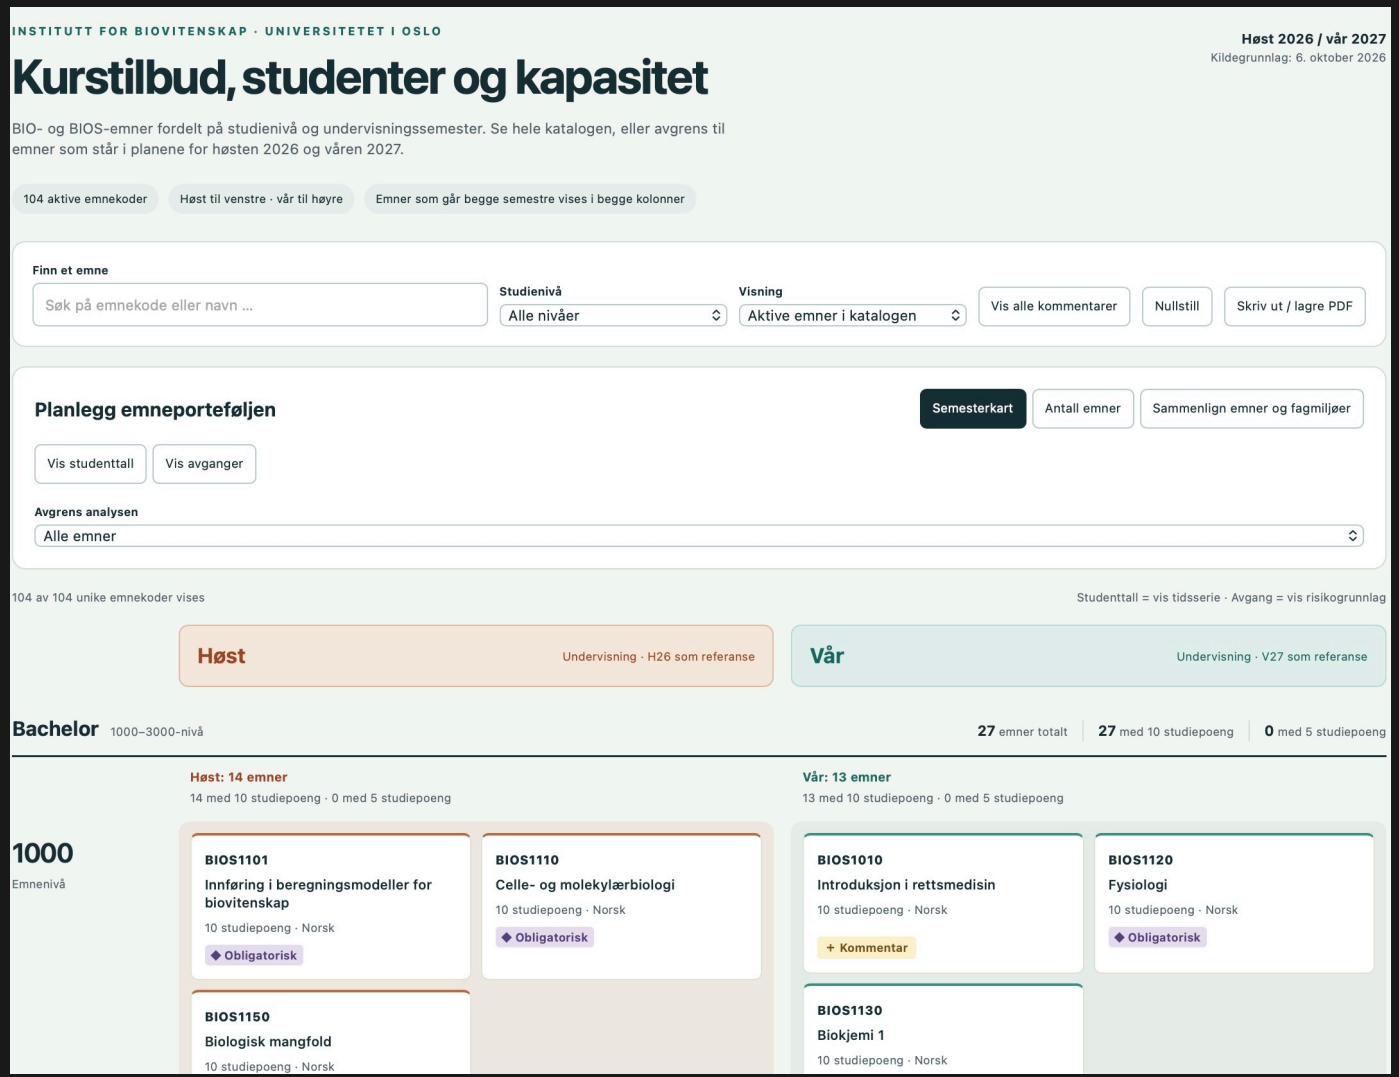

Checking field data files

Example from my own work

Course overview

How to get started

Agent School

https://pages.github.uio.no/alexajo/agent-skolen

The companies support research

https://openai.com/nb-NO/index/chatgpt-for-academic-researchers

Conclusion

How far can you get without a subscription to Claude Code?

- Far enough!
